Multiplication Basic Facts Check-Up
Teacher Guide
LEARNING
THROUGH DOING

| Item | Correct Answer / Expected Response | Concept / Objective | Alternate responses and possible reasoning / errors | Learning Through Doing lessons |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 2 (or two) | Set model <br> Ability to see a group as a unit (unitising) There are 3 stars in each group. There are 2 groups of three stars. | 3 - focus is on the number in each group 6 - focus is on the total number of stars not the groups | Multiplication - Set model (Joining Equal groups) |
| 2 | $2^{\text {nd }}$ option <br> (3 groups of 4 triangles) | Interpret a multiplicative expression as a number OF groups and a number IN EACH group | Option 1 - additive thinking $(3+4)$ <br> Option 3 - multiplicative but reversed. This picture shows 4 threes rather than 3 fours. Correct total. Incorrect format. | Multiplication - Set Model (Joining Equal Groups) |
| 3 | 5 (or five) | Length model <br> Multiplication as equal jumps - Number OF jumps and size or number IN EACH jump | 4 - multiplicative thinking but looking at number OF groups instead of size of the jump 6 - additive thinking counting the number of marks between not spaces | Multiplication - <br> Length Model <br> (Number lines) |
| 4 | 18 (3x6) | Area Model <br> Multiplication as a number OF rows and number IN EACH row | 8 - count of the number shown in diagram 10 - number need to complete the fill 15 - see 2 fives needed to fill and thought 3 fives or added to top row | Multiplication Area Model (Arrays) |
| 5 | $\begin{aligned} & \hline 1^{\text {st }} \text { option } \\ & \text { hearts } 2 \times 1) \\ & 3^{\text {rd }} \text { option } \\ & (2 \text { rows of } 3 \\ & \text { diamonds } 2 \times 3) \end{aligned}$ | Double as 2 of the same item or quantity. Double as any multiplicative situation where the number OF groups is 2. | Partially correct - Choose one correct only - thought they only needed 1 Or didn't recognise the other Option 2 (3 threes) focus on same number OF groups and IN EACH. Saw equal groups but wrong number IN EACH group Option 4 - ( 5 stars - 1 five) could be looking at symmetry | Multiplication - <br> Basic Facts 2x <br> (Doubles Strategy) |
| 6 | Any array that represents rows of 9 | Area Model <br> Connecting Multiplication to Area. Seeing Multiplication as a number OF rows and a number IN EACH row | Additive thinking - shade 3 spaces and 9 spaces Any array that is not $3 \times 9$. Shows multiplicative thinking but wrong factors An array of $9 \times 3$ can't fit in the space provided so can't reverse the expression | Multiplication Area Model (Arrays) |

| Item | Correct Answer / <br> Expected Response | Concept / Objective | Alternate responses and possible reasoning / errors | Learning Through Doing lessons |
| :---: | :---: | :---: | :---: | :---: |
| 7 | $1^{\text {st }}$ option <br> (6+6) - repeated <br> addition <br> $4^{\text {th }}$ option <br> (6x2- <br> commutativity) | Multiplication as repeated addition. Multiplication as a commutative operation | Option 2 - focus on 12 as the answer to $2 \times 6$ and retain the $2 x$ format Option 3 - focus on two numbers the same but multiplication (square not double) <br> Option 5 - thinking additive representation is the same as multiplicative | Multiplication - Set Model (Joining Equal Groups) Multiplication A commutative operation |
| 8 | $2^{\text {nd }}$ Option <br> (Half of 10×8) <br> $4^{\text {th }}$ option ( $8 \times 5$ ) <br> $5^{\text {th }}$ option <br> ( $8+8+8+8+8$ shows <br> repeated addition as 5 eights) | $5 x$ strategy as half of 10x <br> Multiplication as a commutative operation (turn arounds) | Option 1 (5+8) - thinking addition the same as multiplication Option $3(5+5+5+5+5)$ repeated addition but the wrong number IN EACH group. 5 fives instead of 5 eights. | Multiplication - <br> Basic Fact 5x (Half of 10x) <br> Multiplication - <br> A Commutative Operation |
| 9 | ```3 'rd Option - (3+3+3+3)- repeated addition 4h}\mathrm{ Option (Double Double 3) 5 th Option (3x4) - commutativity``` | 4x strategy as Double Double Multiplication as a commutative operation | Option 1 - (4+3) - double 3 thinking addition the same as multiplication Option 2 - double ( $2 x$ not 4 x ) | Multiplication - <br> Basic Fact 4x 8x <br> (Extended Doubles) <br> Multiplication - <br> A Commutative <br> Operation |
| 10 | $1^{\text {st }}$ option $(5 \times 6+2 \times 6)$ <br> $4^{\text {th }}$ option $(8 \times 6-1 \times 6)$ <br> $5^{\text {th }}$ option (Double 3x7) | $7 x$ strategy as $5 x+2 x$ or $8 x-1 x$ <br> Commutative principle to swap a multiplication so a different strategy can be used - see $7 x 6$ as $6 x 7$ and use Double 3x | $2^{\text {nd }}$ option - double is a multiplication strategy but not for $7 x$ $3^{\text {rd }}$ option - additive thinking only 5 sevens represented not 6 sevens | Multiplication Basic Fact 7x ( $5 x+2 x$ or $8 \mathrm{x}-1 \mathrm{x}$ ) Multiplication 6x (Double $3 x$ or $5 x+1 x$ ) Multiplication A commutative operation |

| Item | Correct Answer / <br> Expected Response | Concept / Objective | Alternate responses and possible reasoning / errors | Learning Through Doing lessons |
| :---: | :---: | :---: | :---: | :---: |
| 11 | Recall multiplication facts | Automaticity knowing facts 'off-byheart'. | Looking for a pattern in the facts that are not known 'off by heart'. <br> Marking multiple facts with X will indicate the particular groups of facts a student is not familiar with e.g. $6 x 7 x$ $8 \times 9 x$ are commonly left out. <br> Lessons can target strategies for these facts. After lessons have been taught the number of facts completed improves as does student confidence | Multiplication <br> Basic Facts 2x <br> Multiplication - <br> Basic Facts 3x <br> Multiplication - <br> Basic Facts 1x 0x <br> Multiplication - <br> Basic Facts 10x <br> Multiplication - <br> Basic Facts 5x <br> Multiplication - <br> Basic Facts $4 \mathrm{x}, 8 \mathrm{x}$ <br> Multiplication - <br> Basic Facts 9x <br> Multiplication - <br> Basic Facts 6x <br> Multiplication - <br> Basic Facts 7x <br> Multiplication - <br> Basic Facts Strategy <br> Review |

## Notes:

Look for concepts across questions - e.g. consistent incorrect answers:

- Choosing additive representations for multiplication - check response Question 2 (Option 1:3+4), Question 7 (Option 5: 2+6), Question 8 (Option 1: 5+8) and Question 9 Option 1: 4+3)
- Multiplication Area model. Compare responses between Question 1 and Question 6.
- Multiplication as repeated addition - check responses to Question 1, Question 2 (Choose Option 2 - correct or Option 3: incorrect but thinking repeated addition), Question 8 (Option 3 or 5), Question 9 (Options 3) and Question 10 (Option 3)
